

# PAVAN GOLESAR'S NOTES

## Easy Way To Remember Table In SAP

The easiest way to remember the table in sap is:

Just try to remember the sap terminology of representing the business or buisness objects... such as

all **vendor tables** start with L such as lfa1, etc..

all **customer tables** start with K ... Kna1, konv...

all **sales tables** start with V... vbak vbap

all **master data tables** start with T... T001, t001w

all **bank tables** start with B.. Bknf, bkpf....

all **purchasing tables** start with E.. ekko, ekpo etc..

all **material tables** start with M... mara, makt, marc...

and

in sales, delivery, billing, purchasing...

if the tables name contains K in it it is Header data

such as vbak, likp, vbrk, ekko...

if the tables name contains P init it is Item data

such as vbap, lips, vbrp, ekpo ....

Coming to FI tables... there are only 6 important tables in whole Finance module which are mostly used by abapers.

They can be remember by:

if the table name contains I, that is open item

if the table name contains A, that is closed item

if the table name ends with S, that is GL account

exp BSIS- GL master open items

BSAS- GL master closed items

like wise...

if the table name ends with D, that is customer
